

EARLY VERSION · IMPROVING

ArchitectureScope

User Guide

Everything you need to get started, step by step.

Open the app

architecturegeneration.streamlit.app

Sign in with your @sonamation.com Google account

Found something that doesn't work? Click the orange Feedback button (bottom-right) in the app.

October 2026

→ Quick start

Short on time? These four steps are all you need.

- 1 Open **architecturegeneration.streamlit.app** in Chrome or Edge.
- 2 Click **Sign in with Google** and choose your **@sonamation.com** account.
- 3 On **Setup & API keys**, paste your Anthropic key (only needed for AI documents — see page 5).
- 4 Follow the menu on the left **from top to bottom**: Discover → Assess → Design → Propose → Deliver.

IMPORTANT This is an **early version**. Some things will change and you may find bugs. If something doesn't work, that's **not normal**. Tell me with the orange **Feedback** button in the bottom-right corner of any page (see section 9).

In this guide

	Section	What you'll learn
1	Sign in	How to get into the app
2	Find your way around	The menu and the built-in help
3	Add your keys	The one-time setup for AI and HubSpot
4	Run a discovery call	Take notes and create the client documents
5	Create an architecture	Generate a HubSpot design in one click
6	Download and save	Keep your work safe
7	All the tools	What every page is for
8	Good habits	Avoid losing work
9	Report a bug or idea	The Feedback button: one minute, no email needed
10	What's coming	How the app will improve

1 Sign in

The app is private to the SonaMation team.

- 1 Go to **architecturegeneration.streamlit.app**.
- 2 Click the orange **Sign in with Google** button.
- 3 Pick your **@sonamation.com** account. You land on the Setup page.

Sign in to ArchitectureScope

This workspace is private — sign in to continue.

Sign in with Google

1

The sign-in screen. Click the button marked 1.

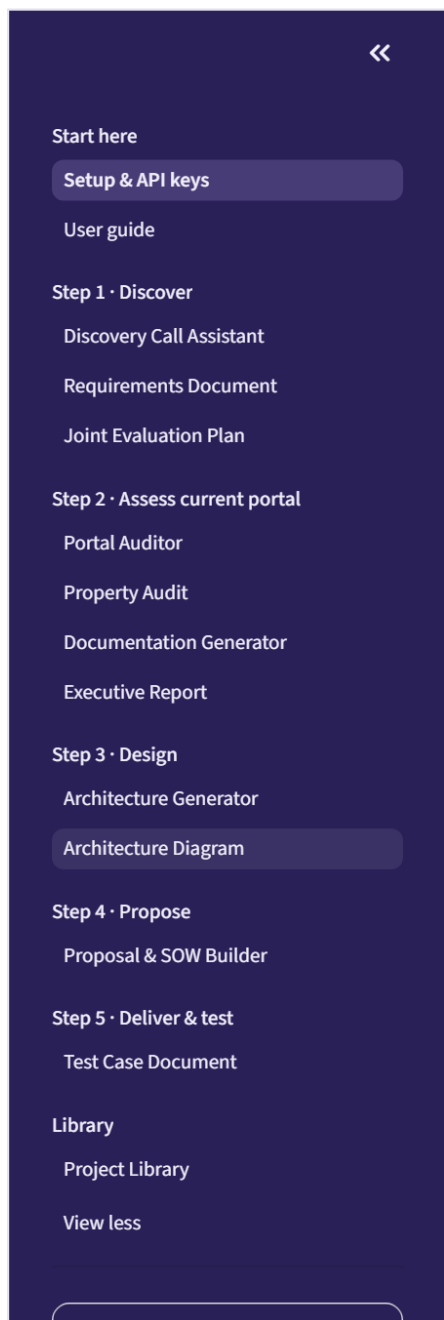

TIP Seeing “**isn't authorized to use this app**”? You signed in with a personal Google account. Click **Sign out** and choose your @sonamation.com account instead.

TIP The app may take up to a minute to wake up the first time in a while. That's normal: just wait.

2

Find your way around

Everything lives in the menu on the left.

The menu (all pages shown)

Work from top to bottom. The menu follows a project from the first call to hand-over:

Step 1 · Discover: the client call and requirements

Step 2 · Assess: check the client's current HubSpot

Step 3 · Design: plan the HubSpot setup

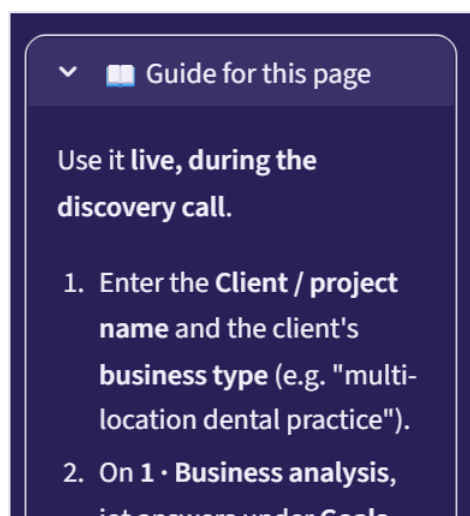

Step 4 · Propose: proposal and Statement of Work

Step 5 · Deliver: test plan

Library: everything you saved

Only see part of the list? Click **View 4 more** at the bottom of the menu.

Need help on any page? Open **Guide for this page** at the bottom of the menu. It shows the steps for the page you're on.

The help box at the bottom of the menu

3 Add your keys

Do this once each time you open the app. It takes a minute.

Step 0 · Connect your API keys

Each key is only needed for the pages listed under it — skip any you won't use. Pasted keys are kept in this browser session's memory only: never written to disk, never logged.

Anthropic API key 1

Needed for: Discovery Call Assistant (drafts the business analysis and client explainer).

Anthropic API key ⓘ

Paste and press Enter ⓘ

> How do I get an Anthropic API key?

HubSpot private app token 2

Needed for: Portal Auditor, Property Audit, Documentation Generator (read-only access to a live portal).

HubSpot private app access token ⓘ

Paste and press Enter ⓘ

> How do I get a HubSpot token?

The Setup & API keys page. You only need the keys for the tools you use.

1 · Anthropic API key: for the AI documents in the Discovery Call Assistant

- 1 Sign in at **console.anthropic.com**.
- 2 Open **API Keys** → **Create Key**. Name it "ArchitectureScope".
- 3 Copy the key (it starts with **sk-ant-**), paste it in box **1**, and press **Enter**.

2 · HubSpot token: only to check a client's existing HubSpot

Needed for Portal Auditor, Property Audit and Documentation Generator. Click "**How do I get a HubSpot token?**" under box **2** for the steps, or ask the client's HubSpot admin. The app only **reads**: it never changes anything in the client's HubSpot.

TIP Keys are kept only while the browser tab is open, never saved. Next time, just paste them again.

4 Run a discovery call

Open **Discovery Call Assistant** (Step 1 in the menu) and keep it open during the call.

Client / project name
Bright Smiles Dental

Client's business type
multi-location dental practice

1 · Business analysis (during the call) 2 · Client explainer (share with the client)

Answer what you can, in any order. Anything left blank becomes a specific follow-up question in the generated document — nothing is guessed.

Goals Data Processes Solutions Design

3 of 5 questions answered

Which areas of the business are they looking to grow?
New patients, 2 new clinics

Long-term goals (12–24 months)

KPIs — how will they measure success?
lead-to-patient rate, response time

Timeline / key dates

Why are they moving to HubSpot?
spreadsheets can't keep up with 3 locations

Generate business analysis

> Back up, restore, or reset call notes

- 1 Type the **client's name** and their **type of business**.
- 2 Use the tabs **Goals, Data, Processes, Solutions Design** to move between topics.
- 3 Type your notes in the boxes. **Shorthand is fine and blanks are fine**: anything left empty becomes a follow-up question in the document.

Generate business analysis

> Back up, restore, or reset call notes

- 4 After the call, click **Generate business analysis**. A clean document appears in a few seconds. (The button stays grey until your Anthropic key is added — see section 3.)
- 5 Open **Back up, restore, or reset call notes** to download a copy of your notes during the call.

TIP Then open the **2 · Client explainer** tab and click **Generate client explainer** for a simple summary written for the client. Always review AI documents before sending them: use the **Edit text** tab under the document.

5 Create an architecture

Open **Architecture Generator** (Step 3 in the menu).

Architecture Generator

Answer a few questions about the project. No HubSpot API access required.

Load sample project

1

Project name

Standard objects in scope

Contact × Company × Deal × Location ×

Child × Family ×

Regions

Choose options ▼

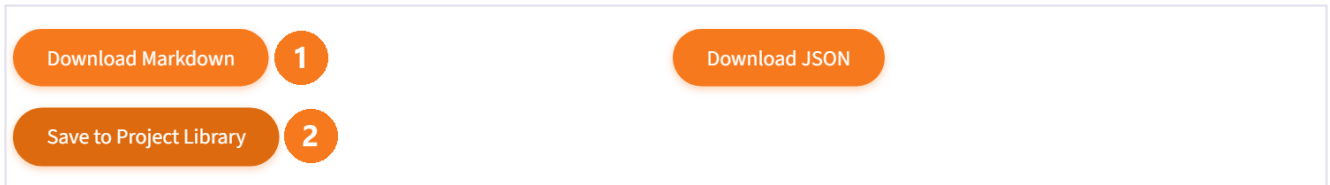

Currencies in scope

Click 1 to try it with an example project.

- 1 Click **Load sample project** to try it, or fill in your client's details.
- 2 Scroll down and click **Generate blueprint**.
- 3 Read the results: records, fields, pipelines and suggested workflows.
- 4 Want a picture? Open **Architecture Diagram** in the menu.

6 Download and save

Every tool ends with the same buttons.

- 1 **Download** the file (Word, Excel, PDF and more, depending on the page).
- 2 **Save to Project Library** to keep a copy in the app, under the client's name.

Project Library

Everything saved from every module, organized by project and document type, with the date each file was generated.

Project

Bright Path Wellness - HubSpot Rebuild

1

Saved files

2 file(s) across 1 document type(s).

Architecture Blueprint (2)			
File	Generated	Size	
Architecture Blueprint_2026-10-06_102811_388.json	2026-10-06 10:28	14.4 KB	2 Download Delete
Architecture Blueprint_2026-10-06_102811_387.md	2026-10-06 10:28	6.5 KB	Download Delete

Project Library (in the menu): choose the client (1), then download any file (2).

IMPORTANT In this early version, files saved in the Project Library **can disappear when the app is updated**. Always download a copy of anything important.

7 All the tools

What each page in the menu is for.

Page	Use it to...	You need
Discovery Call Assistant	Take notes on the client call and create the business analysis and client explainer	Anthropic key
Requirements Document	Write down the client's goals, requirements and open questions	Nothing
Joint Evaluation Plan	Who's involved on both sides, needs and milestones	Nothing
Portal Auditor	Check a client's HubSpot for problems	HubSpot token
Property Audit	Rate every HubSpot field Keep / Review / Remove	HubSpot token
Documentation Generator	Create a document describing a client's HubSpot	HubSpot token
Executive Report	A simple health report for the client	Portal Auditor first
Architecture Generator	Design the HubSpot setup for a project	Nothing
Architecture Diagram	Turn the design into a picture	Architecture Generator or Portal Auditor first
Proposal & SOW Builder	Build the branded proposal and Statement of Work	Nothing
Test Case Document	A test plan based on the requirements	Nothing
Project Library	Find everything you saved	Nothing

Proposal & SOW Builder

Build a seller's proposal and Statement of Work from the Requirements Document and Joint Evaluation Plan — technical approach, management approach, and cost — with a scope that states plainly what is included, what isn't, and what can be added. Everything is editable before the PDF is generated.

1 · Setup 2 · Technical 3 · Scope 4 · Management 5 · Cost 6 · Review & Generate

Start from existing work

Imports are one-off merges: blank fields are filled and rows are appended, nothing you've typed here is overwritten. Requirements become the proposal's requirement list; the JEP's team, milestones and needs flow into Management and Technical.

Import Requirements Document

Import Joint Evaluation Plan

Reset to Sonamotion defaults

Open the Requirements Document page first in this session to enable.

Open the Joint Evaluation Plan page first in this session to enable.

Or load a saved proposal / template (.json)

Upload

200MB per file • JSON

Longer tools, like the Proposal & SOW Builder, are split into numbered tabs: go left to right.

8 Good habits

A few things that will save you time.

Don't refresh or close the tab

Your work lives in the open tab. Refreshing or closing it clears what you typed.

Back up during calls

In Discovery, use **Back up, restore, or reset call notes** to download your notes. You can load them back later.

Download important files

Download everything you need to keep. Don't rely only on the Project Library for now.

Check before you send

All drafts are a starting point. Read and edit them before a client sees them.

Use your work account

Only @sonamation.com Google accounts can sign in.

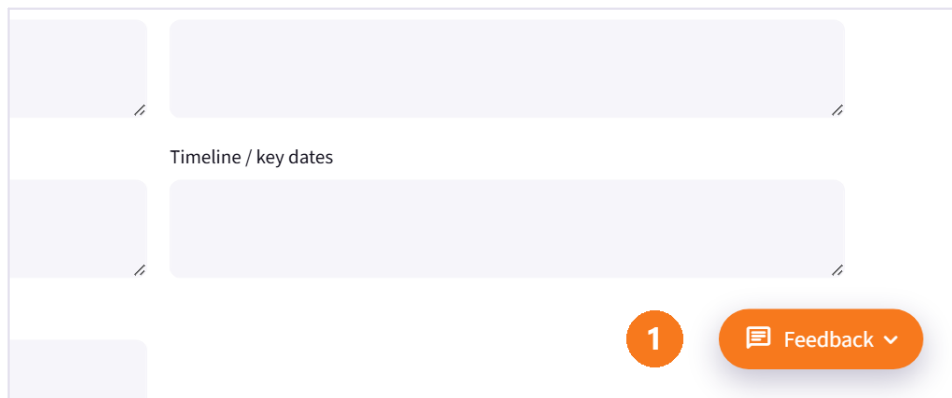

HubSpot is safe

The app only reads a client's HubSpot. It can never change or delete anything.

9 Report a bug or idea

If something doesn't work as this guide describes, it's not you, and it's not normal. Please tell me: it takes a minute.

PLEASE REPORT Use the orange **Feedback** button in the **bottom-right corner of every page**. Your message goes straight to Aylin, no email needed.

The Feedback button is always in the bottom-right corner.

1 Click **Feedback**. A small chat opens.

Something not working? Have an idea?

Tell us what happened and attach screenshots with the + button. It goes straight to Aylin — we add the page you're on (Discovery Call Assistant) automatically.

Bug Idea Question 2

save_row.png 21.3KB 3

When I click Generate business analysis nothing happens. Screenshot attached.

+ 4 5 ↑

Up to 5 screenshots or PDFs.

2 Choose **Bug, Idea** or **Question**.

3 **Describe** what happened, in your own words.

4 Click + to **attach screenshots** (up to 5).

5 Click the **arrow** to send.

You'll see **"Sent — thank you!"**. The **page you were on** and **your email** are added automatically, so I can reply to you.

How to take a screenshot

1 Press **Windows + Shift + S** and drag a box around the problem.

2 Windows 11 saves it in **Pictures > Screenshots** (click the pop-up notification to see it).

3 In the Feedback chat, click + and pick that file.

What counts as a bug

A red error box

Any red message or a block of technical text on the page.

Nothing happens

A button you click does nothing, or the page keeps loading forever.

Wrong or missing content

A document with information that's wrong, missing or garbled.

Lost work

Notes or files that disappear when they shouldn't.

Sign-in problems

Your @sonamation.com account can't get in, or you're sent back to sign-in.

Looks broken

Overlapping text, cut-off buttons, or a page that looks wrong.

A great report says

- 1 **What you did**, step by step, just before it happened.
- 2 **What you expected**, and **what happened instead**.
- 3 A **screenshot** of the problem.

TIP If the chat says sending isn't switched on, or you can't open the app at all, email aylin@sonamation.com instead.

10

What's coming

This is an early version, and it's actively being improved based on your feedback.

Faster discovery calls

Quick-pick answers instead of typing everything, and a flag to mark questions to revisit.

Smart follow-up questions

The app will suggest what to ask next. Example: client has contacts in Europe → privacy questions and the related tasks.

A build checklist

A ready list of what the implementation team needs to build, straight from the discovery call.

Work that's saved for you

Projects saved automatically and shared with the team: no more lost notes or files.

A new, faster app

The same tools in a cleaner, quicker app with one workspace per client.

Your ideas

Click **Feedback**, choose **Idea**, and tell me what would make your work easier.

IMPORTANT Because the app is changing, **pages and buttons may move** or look different from the pictures here. This guide will be updated as things change.
