CHAPTER 1

Overview

The Proposal & SOW Builder turns what you already know about a deal into one branded PDF the client can sign.

The builder lives in the ArchitectureScope sidebar under **Proposals > Proposal & SOW Builder**. It brings the content of the **Requirements Document** and the **Joint Evaluation Plan** together in one place, adds SonaMation's standard text, and lets you edit every field before you generate the PDF.

What you can produce

Document type	Use it when
Proposal + Statement of Work	The client will evaluate and sign the same document (most common).
Proposal	Early in the sale, before terms are agreed. Leave out the signature block.
Statement of Work	The deal is agreed and you need the contractual scope and fees.

The three areas every proposal covers

Every proposal must answer three questions. The builder has a tab for each, and the PDF has a volume for each.

Area	Question it answers	Where
I. Technical	Do you understand our problem, and exactly how will you solve it - with which tools, techniques and procedures?	Technical + Scope tabs
II. Management	How will you run the project: who, how often we meet, the schedule, risks, how work is accepted?	Management tab
III. Cost	How much does it cost, when is it invoiced, and what does anything extra cost?	Cost tab

Why scope gets special treatment

Clients are often unsure what they can ask for and what is included. The builder makes you put every item into exactly one of four buckets - **Included**, **Not included**, **Available as add-on**, **Client provides** - and prints them side by side on a **Scope at a Glance** page right after the contents. If something is not listed as Included, it is not included.

CHAPTER 2

Quick start

The whole workflow, start to finish. Each step is explained in detail in the chapters that follow.

1. Fill in the **Requirements Document** and/or **Joint Evaluation Plan** pages for the deal (optional, but saves typing).
2. Open **Proposal & SOW Builder**. On **1 - Setup**, click **Import Requirements Document** and/or **Import Joint Evaluation Plan**, or load a saved template (.json).
3. Still on Setup: choose the document type, title, dates and both parties' contacts. Write a short executive summary.
4. On **2 - Technical**: describe the problem, the objectives, the requirements and the proposed solution. Adjust the standard methodology, tools and techniques if needed.
5. On **3 - Scope**: build the scope table. Use the preset libraries and the **Draft a scope item for every requirement** button, then give every In Scope item a limit and acceptance criteria.
6. Add at least one **Out of Scope** item for things the client is likely to assume are included.
7. Check **Requirements coverage** at the bottom of the Scope tab until no requirement shows 'Not covered'.
8. On **4 - Management**: team, meetings, schedule, risks, KPIs.
9. On **5 - Cost**: milestone fees, add-on menu, rate card, discount.
10. On **6 - Review & Generate**: clear the warnings, choose the optional sections, then **Download PDF** and **Save to Project Library**.

Your work stays while you move around

You can switch tabs, and even visit other pages, without losing what you typed. To keep a copy between sessions, use **Download editable copy (.json)** on the last tab and load it back later from the Setup tab.

CHAPTER 3

Tab 1 - Setup

Front matter for the document: who, when, what - plus the shortcuts for bringing in existing work.

Proposal & SOW Builder

Build a seller's proposal and Statement of Work from the Requirements Document and Joint Evaluation Plan — technical approach, management approach, and cost — with a scope that states plainly what is included, what isn't, and what can be added. Everything is editable before the PDF is generated.

1 · Setup 2 · Technical 3 · Scope 4 · Management 5 · Cost 6 · Review & Generate

Start from existing work

Imports are one-off merges: blank fields are filled and rows are appended, nothing you've typed here is overwritten. Requirements become the proposal's requirement list; the JEP's team, milestones and needs flow into Management and Technical.

Import Requirements Document

Import Joint Evaluation Plan

Reset to SonaMation defaults

Open the Requirements Document page first in this session to enable.

Open the Joint Evaluation Plan page first in this session to enable.

Or load a saved proposal / template (.json)

demo.json
13.1KB

+

Load file

Document

Document type

Proposal + Statement of Work

Engagement title

HubSpot Sales Hub Implementation

Reference / SOW number

SM-2026-014

Issue date

Effective date

Expiration date

Proposal valid until

The Setup tab. The import buttons are greyed out until the matching page has been opened in this session.

Start from existing work

Control	What it does
Import Requirements Document	Purpose becomes 'Understanding of the problem'; goals become objectives; customer requirements become numbered requirements (R-01...); definitions go to the glossary; risks, project plan and open questions go to Management and Assumptions.
Import Joint Evaluation Plan	Prospect name becomes the client; partner contact becomes the SonaMation contact; team roster goes to Team & Roles; technical and business needs become requirements (unconfirmed ones marked 'To Confirm'); milestones go to Schedule; questions become assumptions.
Reset to SonaMation defaults	Clears the proposal and restores the standard text. Download a .json copy first if you might want the current version back.

Control	What it does
Load a saved proposal / template	Pick a .json file, then click Load file .

Imports never overwrite

Imports only fill fields that are still empty, and they add rows to tables - nothing you've typed is replaced. Importing the same document twice will add its rows twice, so import once, then edit.

Document and contacts

- **Document type** changes the cover label and the wording of the signature block.
- **Reference / SOW number** appears on the cover and in every page footer.
- **Effective / Expiration date** match the SOW's contract term. **Proposal valid until** tells the client how long the pricing holds. Blank dates are left off the cover.
- **Addresses and contacts for notices** prints as the two-column table on the cover, as in the SOW template.
- **Executive summary**: two or three sentences - the client's problem, what SonaMation will deliver, and the outcome. **About SonaMation** is standard text; edit it only if this client needs something different.

CHAPTER 4

Tab 2 - Technical

Volume I of the proposal: show you understand the problem, and exactly how you'll solve it.

Proposal & SOW Builder

Build a seller's proposal and Statement of Work from the Requirements Document and Joint Evaluation Plan — technical approach, management approach, and cost — with a scope that states plainly what is included, what isn't, and what can be added. Everything is editable before the PDF is generated.

1 · Setup 2 · **Technical** 3 · Scope 4 · Management 5 · Cost 6 · Review & Generate

Volume I — Technical Approach. Show that SonaMation understands the problem, and exactly how it will be solved: the tools, techniques and procedures used to implement it.

1.1 Understanding of the problem

Acme tracks deals in spreadsheets, so leadership has no reliable pipeline view.

- Renewals are missed because nobody is alerted
- Contacts are duplicated between the ERP and email tools

Current state (optional)

1.2 Objectives

Objective	Success Measure
One source of truth for customer data	0 duplicate contacts after sync

1.3 Requirements

IDs (R-01, R-02...) are assigned automatically if left blank; scope items cite them in the Scope tab.

The Technical tab.

Field	What good looks like
1.1 Understanding of the problem	The client's situation in their own words, and why it matters. Start lines with '-' to print them as bullets.
Current state (optional)	What they use today and what's broken - e.g. findings from the Portal Auditor.
1.2 Objectives	Business outcomes, each with a measurable success measure.
1.3 Requirements	What the solution must do, one per row. Leave ID blank to get R-01, R-02... automatically, or type your own (e.g. 123). Priority: Must Have, Should Have, Nice to Have, To Confirm.
1.4 Proposed solution	How the requirements will be met - the approach, not the task list (that goes in Scope).
1.5 Methodology	Pre-filled with SonaMation's five phases. Adjust activities and outputs for this deal.

Field	What good looks like
1.6 Tools & platforms	Every tool used, what for, and who provides it (SonaMation, Client, Third Party). Client-provided tools are a common source of disputes - list them.
1.7 Techniques & procedures	How the work is done: sandbox-first, requirements traceability, QA then UAT, etc.
Glossary	Terms the client uses that mean something specific (e.g. 'Member').

CHAPTER 5

Tab 3 - Scope

The most important tab. Every item a client might ask about goes into exactly one bucket, with limits the client can check.

The four buckets

Status	Means	Printed as	Use it for
In Scope	Delivered under this agreement, up to the stated limit.	INCLUDED	Every deliverable you are committing to.
Out of Scope	Not part of this agreement. Can only be added with a Change Request.	NOT INCLUDED	Things the client is likely to assume are included - migrations, custom code, extra training, content writing.
Optional Add-on	A pre-priced option the client can add at any time.	AVAILABLE AS ADD-ON	Upsells from the add-on menu. The price is shown next to the item.
Client Responsibility	Something the client must provide; the schedule depends on it.	YOUR TEAM PROVIDES	Access, credentials, data exports, timely feedback, a decision-maker.

Filling the scope table

There are three ways to add items. You can mix them.

- **Preset libraries** (expand 'Add items from the preset libraries'). *Common deliverables* are already written with a limit, tools and acceptance criteria - pick one or more, choose a status under **Add as**, and click **Add deliverables to scope**. *Add-on services* are added to the Cost tab's menu with a price and listed here as Optional Add-ons.
- **Draft a scope item for every requirement not yet covered** creates one In Scope item per requirement that no scope item cites yet, with its Req. ID already filled in. Then edit each one into a concrete deliverable.
- **Type directly** into the table. Click the empty last row to add a row; select a row and press Delete to remove it.

Proposal & SOW Builder

Build a seller's proposal and Statement of Work from the Requirements Document and Joint Evaluation Plan — technical approach, management approach, and cost — with a scope that states plainly what is included, what isn't, and what can be added. Everything is editable before the PDF is generated.

1 · Setup 2 · Technical 3 · **Scope** 4 · Management 5 · Cost 6 · Review & Generate

Scope is the section clients misread most. Put every item a client might ask about into exactly one bucket. Give each In Scope item a quantity limit and acceptance criteria, and list common requests you are *not* doing as Out of Scope — that's what prevents disputes later.

Add items from the preset libraries

Common deliverables (already phrased with limits and acceptance criteria)

Choose options

Add deliverables to scope

Add-on services (added to the Cost volume's menu and listed in scope as Optional Add-ons)

Choose options

Add services to add-on menu

Add as

In Scope

Draft a scope item for every requirement not yet covered

Scope items

IDs (S-01, S-02...) are assigned automatically. 'Req. ID' links an item to the requirements it satisfies (comma-separated, e.g. R-01, R-03).

Top of the Scope tab: preset libraries and the Draft button.

Columns

Column	How to fill it
ID	Leave blank - S-01, S-02... are assigned automatically. Clients use these IDs to ask about scope ('Is S-07 included?').
Workstream	A grouping such as Discovery, Configuration, Automation, Integration, Data, Enablement.
Item	The deliverable, as a noun: 'Renewals deal pipeline', not 'Help with pipelines'.
Status	One of the four buckets above.
Quantity / Limit	The upper limit: 'Up to 10 workflows', '2 live sessions'. This is what stops scope creep - always fill it for In Scope items.
Tools / Techniques	What will be used to deliver it. Prints in the Technical volume's scope table.
Req. ID	The requirement ID(s) this item delivers, separated by commas: 'R-01, R-03'. This drives the coverage check below.
Acceptance Criteria	How the client will know it's done: 'Records sync both ways on test data'. The review tab warns if an In Scope item has none.
Milestone	Which payment milestone the item belongs to (optional).

Preview - Scope at a Glance

Below the table, a live preview shows the four buckets exactly as they will appear on the Scope at a Glance page of the PDF. Read it as the client would: is anything they'll expect missing from both Included and Not included?

Scope items							
IDs (S-01, S-02...) are assigned automatically. 'Req. ID' links an item to the requirements it satisfies (comma-separated, e.g. R-01, R-03).							
ID	Workstream	Item	Status	Quantity / Limit	Tools / Techniques	Req. ID	Acco
S-01	Integration	Native integration setup	In Scope	1 integration, up to 3 sync	HubSpot App Marketplace / Data	R-01	Records
S-02	Configuration	Deal / ticket pipelines	In Scope	Up to 2 pipelines, 8 stages	HubSpot pipeline settings	R-02	Stages a
S-03	Automation	Workflows	In Scope	Up to 10 workflows	HubSpot Workflows, overwrite-ri		Each wc
S-04	Enablement	User training	In Scope	2 live sessions, recorded	Video call, training guide		Session
S-05	Data	Custom-coded integrations or middleware	Out of Scope				
S-06	Access	Provide Super Admin access and ERP API credentials	Client Responsibility				
S-07	Add-on	Lead Scoring Setup	Optional Add-on				
S-08	Add-on	Marketing Support Team	Optional Add-on				

In Scope (4)
Delivered, up to the stated limit.

- S-01 Native integration setup
1 integration, up to 3 synced objects
- S-02 Deal / ticket pipelines
Up to 2 pipelines, 8 stages each
- S-03 Workflows
Up to 10 workflows
- S-04 User training
2 live sessions, recorded

Out of Scope (1)
Not included — only via Change Request.

- S-05 Custom-coded integrations or middleware

Optional Add-on (2)
Pre-priced; client can add any time.

- S-07 Lead Scoring Setup
- S-08 Marketing Support Team

Client Responsibility (1)
The client provides this.

- S-06 Provide Super Admin access and ERP API credentials

Scope table (top) and the live preview (bottom).

Requirements coverage

The coverage check makes sure no requirement is silently dropped. For every requirement in the Technical tab, it looks for scope items whose **Req. ID** column contains that requirement's ID, and labels the requirement with the result.

S-04 User training 2 live sessions, recorded			
Requirements coverage			
ID	Requirement	Scope Items	Coverage
R-01	Sync contacts nightly from the ERP	S-01	Covered
R-02	Renewals deal pipeline	S-02	Covered
123	Migrate 5 years of historical emails	-	Not covered

Not addressed by any scope item: 123. Put that requirement ID in the 'Req. ID' column of the In Scope item that delivers it — or, if you're not doing it, of an Out of Scope item so the exclusion is stated explicitly.

Assumptions

Requirement 123 is listed in the Technical tab, but no scope item cites it - so it is 'Not covered'.

Coverage	Meaning	Warning?
Covered	At least one In Scope item cites this requirement.	No
Available as add-on	Only an Optional Add-on item cites it - the client can buy it.	No
Client responsibility	Only a Client Responsibility item cites it.	No
Excluded	Only an Out of Scope item cites it - you have stated explicitly that it isn't included.	No
Not covered	No scope item cites it at all. The requirement is in the document, but nobody has said whether it will be delivered.	Yes

What the warning means

Not addressed by any scope item: 123

The requirement with ID **123** is listed under 1.3 Requirements, but **no row in the scope table has 123 in its Req. ID column**. Left like this, the client reads a requirement in your proposal with no matching deliverable and no exclusion - they will assume it is included. That's exactly the kind of misunderstanding this check exists to catch.

The number in the message is the requirement's **ID**, not a count and not a row number. It's 123 here because that ID was typed into the requirement's ID column; requirements with a blank ID get R-01, R-02... instead.

How to clear it - pick one

- **You will deliver it:** find the In Scope item that delivers requirement 123 and type **123** in its Req. ID column (add it after a comma if the cell already has IDs, e.g. 'R-01, 123'). If no item delivers it yet, add one - or click **Draft a scope item for every requirement not yet covered**.
- **You won't deliver it:** add an **Out of Scope** item (e.g. 'Migration of historical emails') with **123** in its Req. ID column. Coverage shows 'Excluded', the warning clears, and the client sees the exclusion stated plainly.
- **It's available at extra cost:** cite 123 on an **Optional Add-on** item. Coverage shows 'Available as add-on'.
- **It isn't a real requirement:** delete the row from 1.3 Requirements on the Technical tab.

Why an ID might not match

- The ID must match exactly (upper/lower case doesn't matter): **R-123** does not match **123**, and **R-1** does not match **R-01**.
- Separate several IDs with commas: 'R-01, 123'. Spaces are fine; semicolons and 'and' are not.
- The scope item must have something in its **Item** column - empty rows are ignored.
- Check the ID in the Requirements coverage table itself - that's the exact text to copy into Req. ID.

Assumptions and change requests

Assumptions are the conditions your price and schedule depend on (access within 5 days, one decision-maker, feedback turnaround). Imported open questions arrive here as 'To be confirmed: ...' - resolve or keep them before sending.

Change Request process is standard text explaining how anything not In Scope can be added. It's what you point to when a client asks for something extra.

CHAPTER 6

Tab 4 - Management

Volume II: how SonaMation will manage contract performance.

Proposal & SOW Builder

Build a seller's proposal and Statement of Work from the Requirements Document and Joint Evaluation Plan — technical approach, management approach, and cost — with a scope that states plainly what is included, what isn't, and what can be added. Everything is editable before the PDF is generated.

1 · Setup 2 · Technical 3 · Scope 4 · **Management** 5 · Cost 6 · Review & Generate

Volume II — Management Approach. How SonaMation will manage contract performance.

2.1 Project team & roles

Side	Role	Name	Email	Responsibilities
SonaMation	Solutions Architect	Lead Architect		Design and build
Client	Sponsor	Jane Doe	jane@acme.com	Approves scope and acceptance

2.2 Governance & communication

Meeting / Report	Cadence	Participants	Purpose
Kickoff	Once	Both teams	Confirm scope, roles, timeline, access
Status call	Weekly	Project leads	Progress, blockers, decisions needed
Written status report	Weekly	Sponsor, project leads	Progress against milestones, risks, open change requests
Steering review	Per milestone	Sponsors	Milestone acceptance, scope and budget decisions

2.3 Schedule

The Management tab.

Section	What to enter
2.1 Project team & roles	Both sides' people: side, role, name, email, responsibilities. Imported from the JEP roster.
2.2 Governance & communication	Pre-filled: kickoff, weekly status call and report, steering review per milestone. Adjust cadence per deal.
2.3 Schedule	Phases or milestones with start/end dates and key deliverables. Dates are free text ('Week 3' works).
Risk management	Risk, likelihood, impact, mitigation, owner. Imported WRD risks arrive as 'Risk: ...' or 'Challenge: ...'.
Targeted KPIs	Primary = value drivers tied to ROI (closed deals, revenue). Secondary = operational improvements (MQLs, site visits). Add a target for each.

Section	What to enter
Acceptance process	Standard text: 5 business days to accept or list deficiencies against the acceptance criteria.

CHAPTER 7

Tab 5 - Cost

Volume III: what it costs, when it's invoiced, and the price of anything beyond scope.

Milestone	Deliverables	Start On or Before	Due On or Before	Fee
Milestone 1: Initial Engagement	Kickoff, access, audit	Upon signature		\$11500.00
Milestone 2: Intake	Requirements, blueprint	As completed	As completed	\$2500.00
Milestone 3: Launch	Build, UAT, training	As completed	As completed	\$2500.00

Optional add-on services menu

Tick 'Add to Total' for add-ons the client has already chosen.

Service	Includes	Cost	Billing	Add to Total
Lead Scoring Setup	Basic rules and paths, smart lists, notifications and alerts	\$3500.00	One Time	☐
Marketing Support Team	Unlimited chat, 1 hour phone support per month, bi-weekly training webinars; 1:	\$500.00	Monthly	☐

Rate card (for Change Requests)

Role	Hourly Rate
Solutions Architect	\$175.00
HubSpot Consultant	\$150.00
Developer / Integrations	\$165.00

Discount (%) - +

Milestone fees
\$16,500.00

Selected add-ons (one-time)
\$0.00

Discount
\$0.00

Total one-time fee
\$16,500.00

Payment terms (standard text)

As complete and final payment for Services completed, delivered and accepted, the client shall pay SonaMation the fees in the milestone schedule. Invoices are issued on milestone acceptance and are due net 30 days. All amounts are in U.S. Dollars.

Expenses (standard text)

The Cost tab: milestone schedule, add-on menu, rate card and live totals.

Section	How it works
Currency	USD, CAD and MXN print with '\$'; EUR and GBP print with the code after the amount.
3.1 Milestone schedule	Mirrors the SOW template: milestone, deliverables, start on or before, due on or before, fee due on acceptance. The fees add up to the milestone total.
Add-on services menu	Service, what it includes, cost, billing (One Time, Monthly, Per Unit, Per Year, Hourly). Tick Add to Total only for add-ons the client has already chosen.
Rate card	Hourly rates used to price Change Requests that aren't on the add-on menu.
Discount (%)	Applied to milestone fees plus selected one-time add-ons.
Payment terms / Expenses / Confidentiality	Standard text, editable.

One-time and recurring fees are never added together

The total is milestone fees plus selected **one-time** add-ons, minus the discount. Selected recurring add-ons (e.g. \$500 Monthly) are shown on a separate line, so a monthly fee is never mistaken for part of the one-time price.

Check the add-on prices

The add-on preset library is based on the SOW example's Additional Services Menu. Its prices are placeholders - replace them with SonaMation's prices, then save a template (chapter 9) so every new proposal starts with the right ones.

CHAPTER 8

Tab 6 - Review & Generate

Choose what goes in, clear the warnings, and export.

Proposal & SOW Builder

Build a seller's proposal and Statement of Work from the Requirements Document and Joint Evaluation Plan — technical approach, management approach, and cost — with a scope that states plainly what is included, what isn't, and what can be added. Everything is editable before the PDF is generated.

1 · Setup 2 · Technical 3 · Scope 4 · Management 5 · Cost 6 · Review & Generate

Sections to include

The cover, Scope at a Glance, and the Technical, Management and Cost volumes are always included.

☒ Executive Summary	☒ About SonaMation	☒ Glossary of Terms	☒ Targeted KPIs
☒ Risk Management	☒ Optional Add-on Services Menu	☒ Rate Card (Change Requests)	☒ Acceptance & Signatures

In scope	Out of scope	Optional add-ons	Total one-time fee
4	1	2	\$16,500.00

Before sending, check:

- Requirements not addressed by any scope item: 123.

Export

Download PDF
Download editable copy (.json)
Download as reusable template (.json)

The .json copy loads back into this builder (Setup tab) to keep editing. The template keeps only the reusable parts — SonaMation details, methodology, tools, governance, add-on menu, rate card, standard terms — so the next proposal starts from your house style.

Save to Project Library

The Review & Generate tab with one remaining warning.

Sections to include

The cover, Scope at a Glance and the three volumes are always included. You can switch off: Executive Summary, About SonaMation, Glossary, Targeted KPIs, Risk Management, Optional Add-on Services Menu, Rate Card, and Acceptance & Signatures (turn this off for a proposal that isn't meant to be signed).

Warnings and what to do

Warnings never block the PDF - they point at what a client is most likely to question.

Warning	What to do
Client company name is blank	Fill it on Setup - it appears on the cover, the header and the signature block.

Warning	What to do
'Understanding of the problem' / 'Proposed solution' is blank	Fill them on the Technical tab; they're the core of Volume I.
Nothing is marked In Scope	Add deliverables on the Scope tab.
Nothing is marked Out of Scope	Add the things the client is likely to assume are included. Stating exclusions prevents most scope disputes.
In Scope items without acceptance criteria: S-..	Say how the client will know each listed item is done.
Requirements not addressed by any scope item: ..	See 'Requirements coverage' in chapter 5.
Milestone fees total \$0	Enter fees in the Cost tab's milestone schedule.

Export

Button	Gives you
Download PDF	The finished, branded document for the client.
Download editable copy (.json)	Everything in this proposal. Load it back from Setup to keep editing later.
Download as reusable template (.json)	Only the reusable parts: SonaMation contact details, methodology, tools, techniques, governance, assumptions, add-on menu, rate card, standard terms, section choices and KPIs. No client, requirements, scope or fees.
Save to Project Library	Saves the PDF and the .json under the client's name in the Project Library, with the date.

CHAPTER 9

The generated PDF

What the client receives, in order.

Page(s)	Content
Cover	Title, document type, 'Prepared for', issue date, reference; addresses and contacts for notices; effective, expiration and valid-until dates.
Contents	Clickable table of contents (also available as PDF bookmarks).
Executive Summary	Summary and About SonaMation (if switched on).
Scope at a Glance	Counts, total fee, and the four colour-coded buckets with item IDs, limits and add-on prices.
Volume I - Technical Approach	Problem, objectives, requirements, solution, methodology, tools, techniques, detailed scope, out of scope, client responsibilities, add-ons, requirements traceability, assumptions, change requests, glossary.
Volume II - Management Approach	Team, governance, schedule, risks, KPIs, acceptance.
Volume III - Cost & Pricing	Milestone schedule with total, add-on menu, rate card, pricing summary, payment terms, expenses.
Terms & Acceptance	Confidentiality and the signature block for both parties.

Scope at a Glance

Every item a client might ask about sits in exactly one of the lists below. If something is not listed as Included, it is not part of this agreement - it can still be added through the Change Request process described in the Technical volume. Item IDs (S-01, S-02...) are the reference to use when asking about scope.

4

Included items

1

Excluded items

2

Optional add-ons

\$16,500.00

Total one-time fee

INCLUDED (4)

Delivered under this agreement, up to the stated limit.

S-01

Integration: Native integration setup

1 integration, up to 3 synced objects

S-02

Configuration: Deal / ticket pipelines

Up to 2 pipelines, 8 stages each

S-03

Automation: Workflows

Up to 10 workflows

S-04

Enablement: User training

2 live sessions, recorded

NOT INCLUDED (1)

Not part of this agreement. Can be added only through a Change Request.

S-05

Data: Custom-coded integrations or middleware

AVAILABLE AS ADD-ON (2)

Pre-priced options you can add at any time - see the Cost volume.

S-07

Add-on: Lead Scoring Setup

\$3,500.00 One Time

S-08

Add-on: Marketing Support Team

\$500.00 Monthly

CHAPTER 10

Templates, reuse and FAQ

Setting up your house template (once)

1. Open the builder and fill in only the reusable parts: SonaMation contact details, methodology, tools, techniques, governance, standard assumptions, add-on menu with your real prices, rate card, payment/expense terms, and your usual section choices.
2. On Review & Generate, click **Download as reusable template (.json)** and keep the file somewhere shared.
3. For every new deal: Setup > load the template > **Load file**, then import the deal's WRD/JEP.

FAQ and troubleshooting

Question	Answer
The Import buttons are greyed out.	Imports read from the Requirements Document / Joint Evaluation Plan pages in the current browser session. Open (and fill) that page first, then come back.
I imported twice and now rows are duplicated.	Imports add rows every time. Delete the duplicates in the table (select the rows, press Delete).
My requirement shows 'Not covered' but I linked it.	Check the Req. ID matches exactly (R-123 is not 123), is comma-separated, and is on a row whose Item isn't empty.
Can the client see the requirement IDs?	Yes - requirement and scope IDs appear in the PDF so both sides can refer to them.
Where did my proposal go after closing the browser?	The builder doesn't save automatically. Use Save to Project Library or Download editable copy (.json).
The PDF font differs from the app.	The PDF uses Helvetica so it works on any machine without installing fonts; colours match the SonaMation palette.
A character shows as '?' in the PDF.	The PDF font supports Western European characters only; emoji and some symbols are replaced. Dashes and curly quotes are converted automatically.
